

EmbeddedAI Project Report Template

Title Page

University Name:

Department: Digital Transformaiton

Course: EmbeddedAI

Project Title:

Submitted by:

Team Lead Name:

Date:

1. Abstract

Provide a brief overview of the system, its core objectives, technologies used, and the expected outcomes. (~200 words)

2. Introduction

Introduce the problem context and motivation for the project. Explain why this project is relevant in today's technology environment. (~250 words)

3. Literature Review

Summarize 3–4 related works or systems, their methods, and limitations. Highlight how your project improves upon them.

4. System Requirements

- Hardware Requirements
- Software Requirements

5. System Design & Architecture

Include the architectural diagram showing the relationship between modules

Explain each module:

- Input
- Methodology
- Output

6. Implementation

Describe the coding phase, environment setup, and provide code snippet of only the implemented algorithm detailing its steps

7. Output

Add screenshots of key operations and observations that needs to be highlighted

8. Conclusion & Future Work

Summarize the learning outcomes and challenges faced. Mention potential improvements for future versions.

9. References

- Dataset Citation Link
- Reference research papers link
